IViR Lecture Series

"Should we decentralise the oversight of AI?" by Prof. Linnet Taylor

ivir.nl/ivir-lecture-15december2023/

We are 

AI regulation, like technology regulation in general, is structured around formal expertise and independent regulators who are not public-facing in their work. AI as a social phenomenon, however, is broad in its uses and effects, and these regulators are not the best positioned to understand the emergent effects of this class of technologies. This poses challenges regarding public accountability with respect to both those implementing AI, and those regulating it.

This talk will examine the arguments for decentralising some oversight functions systems to societal bodies, including but not limited to sectoral and interest groups. What would it mean to democratise oversight in this way, and what problems would it solve, or create?

Practical details:

Date: 15

December 2023

Time: 15.30-16.45
CET (Amsterdam)

Place:

- REC A5.24

- Online via Zoom
